Ruben,

We are going through the modeling files and noticed that there are multiple entries for each source id in the hapemis file. Some are duplicates and some entries have different values for the same source id. We can't find a reason for it in the model user files.

Would you mind asking your very talented connections what they mean?

Amanda

The ".PFL" and ".SFC" files are the met (should be placed in the "HEM3\MetData" directory of HEM), and the other files are the Census files (should be placed in the "HEM3\Census_2010" directory of HEM).

I'm also attaching the HEM input files for that facility. The "hapemis" file would need to be revised to run the version of HEM that is on the website. The HAP identifiers would need to be changed from a number to a HAP name, so a crosswalk file is attached for that purpose ("HEM_HAP_Num_HAP_Name").

Let me know if there are further questions.

Mark
